

SJN Series

This series integrates the fix table and mobile bridge system supported by two raceways with the Gantry system.

The construction system used in this model makes this machine especially designed for working on voluminous tridimensional workpieces. Its structure offers a great precisión without vibrations, it's designed for light materials machining.

With a longer course for the "Z" axis, it enables us to machining curved items, with the possibility of installing heads with 4 or 5 axis.

Machine entirely protected and covered which offer the option to be soundproof, also to facilitate the loading of large and/or heavy items, the table is stable and as well relatively near the ground.

The robustness of the structure allows high speeds of movement of the axes and excellent finishes.

	2515	3020
X	2500	3000
Y	1500	2000
Z	1200	800

Other measures available on demand

SJN Series

Head composition.

- Vertical milling spindle ES 779 of 18 Kw. HSK/63 – 5 axis
- Vertical milling spindle ES 369 de 13 Kw. HSK/63 – 5 axis
- Tool change's storage with 30 Pos.
- Molding or Steel table in "T" shaped grooves, mechanical fastening of the workpiece.
- TopSolid
- CNC Siemens 840 DSL.

Other configuration is possible on demand.
